Key points

	to next, m	km post	page
China Beach trailhead	+36 / -104	0	JDF-01
Mystic Beach	+166 / -170	2	JDF-01
Bear Beach	+460 / -458	9	JDF-02
Chin Beach	+206 / -205	21	JDF-04
Sombrio Beach	+51 / -33	29	JDF-04
Little Kuitsche Creek	+65 / -38	33	JDF-05
Parkinson Creek trailhead	+35 / -48	37	JDF-06
Payzant Creek	+141 / -115	40	JDF-06
Botanical Beach trailhead		47	JDF-07
Whole trail	+1,159 / -1,170		

Reading the maps

- 1:25,000 (4 cm = 1 km) when printed at actual size.
- Key points show the climb and descent to the next point along the trail, walking west from China Beach.
- Numbered red circles mark km posts at their OpenStreetMap positions. BC Parks lists the trail as 47 km; the mapped trail line measures 40.4 km, so km post numbers are not exact distances.
- Compatible GPS apps can show your position on the GeoPDF map pages. Full notes and credits are on the last pages of this PDF.

About these maps

This is an unofficial map series of the Juan de Fuca Marine Trail, made using open data. It is not produced or endorsed by BC Parks or any land manager, and has not been checked in the field. Always check official sources for closures and changes: bcparks.ca/juan-de-fuca-park.

Notices at the time this series was created

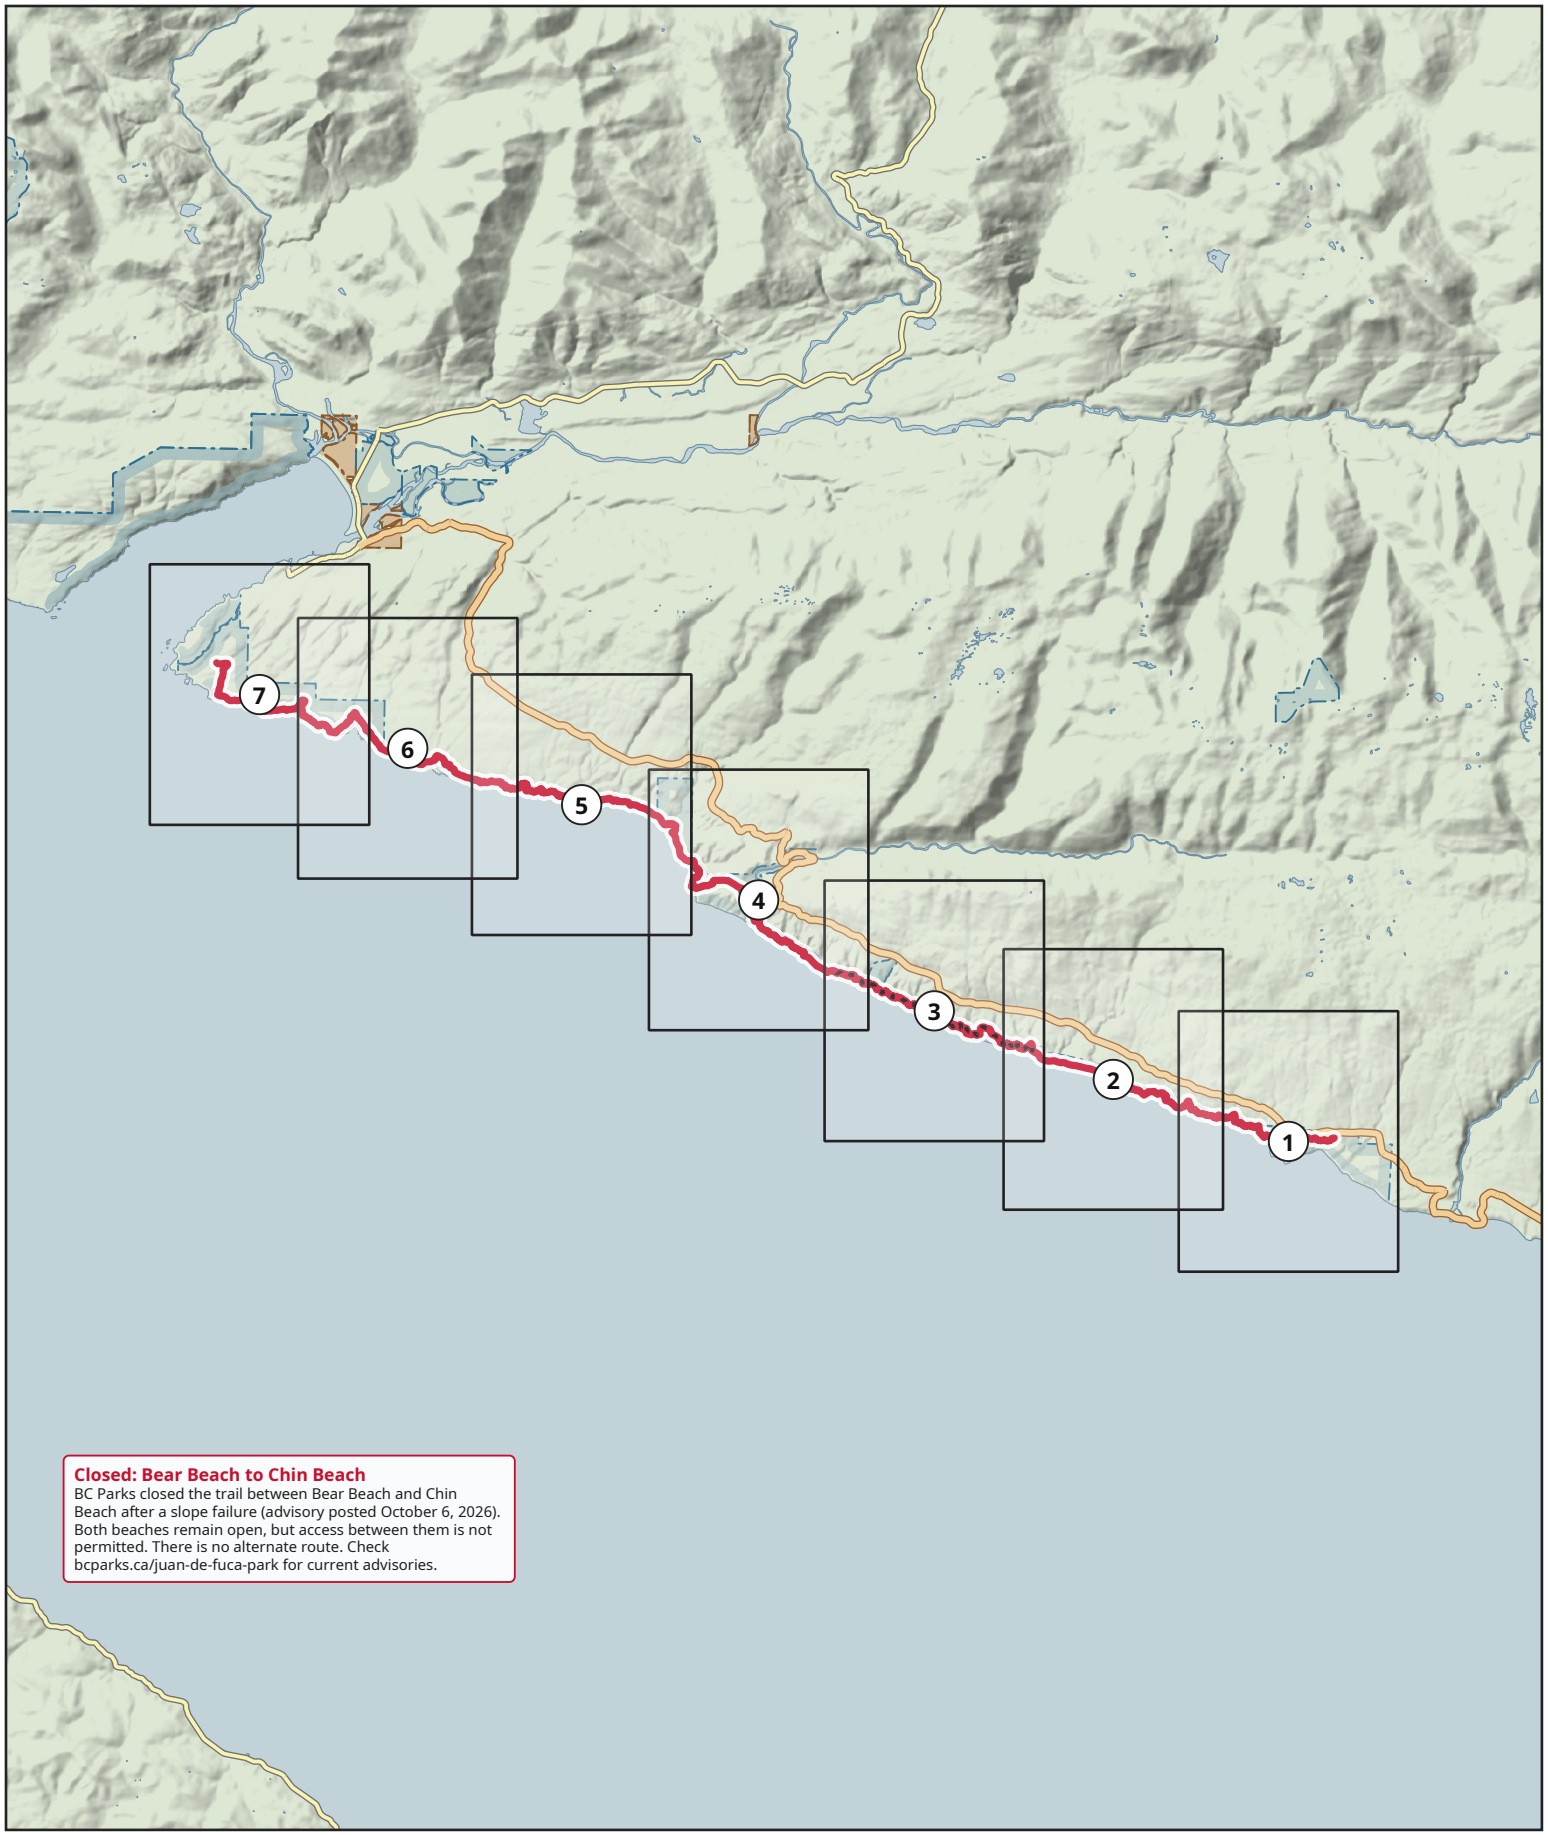

- **Closure.** BC Parks closed the trail between Bear Beach and Chin Beach after a slope failure (advisory posted October 6, 2026). There is no alternate route. Check for current advisories.
- **Tides and waves.** Some sections of the trail are impassable at high tide. Check the tide table for Port Renfrew: tides.gc.ca/en/stations/08525. Rogue waves are common. BC Parks indicates that orange balls mark exit points from the beach.
- **Camping.** A backcountry camping permit is required to camp along the trail: camping.bcparks.ca. Camp on established campsites at the designated campgrounds and store food in the bear caches.
- **Reroutes.** Parts of the trail were rerouted in 2026 and may not match this map. Follow the trail on the ground.
- **Navigation.** Follow official sources, and always have a way to navigate other than this map series. Use this map series at your own risk.

Map pages

About these maps

Juan de Fuca Marine Trail map series (unofficial), version 2026.11, made November 11, 2026 from Overture Maps release 2026-10-21.0.
Maps by Nikolay Senilov · topokit.ca

Safety first

These unofficial maps were made from open data by Nikolay Senilov and published by TopoKit (topokit.ca). They have not been checked in the field and were not produced or endorsed by BC Parks or any other land manager. The trail is in the territory of the Pacheedaht First Nation.

- **Closure.** BC Parks closed the trail between Bear Beach and Chin Beach after a slope failure (advisory posted October 6, 2026). Both beaches remain open, but access between them is not permitted. There is no alternate route. Storm damage has closed parts of this trail before. Check bcparks.ca/juan-de-fuca-park for current advisories.
- **Tides.** Some sections of the trail are impassable at high tide. Beaches shift, and large tides and storm waves reach above the high-tide line. Do not use the sand colours, high-tide line or white dashes to decide whether a beach is safe to pass. Use the tide limits and the Fisheries and Oceans Canada tide table for Port Renfrew (tides.gc.ca, station 08525). Tide predictions do not account for weather, which can raise the water. From the first Sunday of November to the second Sunday of March, a phone connected to a US cell tower may show a time one hour behind BC: make sure your phone shows BC time before you use the tide table.
- **Waves.** Rogue waves are common on the exposed beaches, so watch the water. Orange balls mark exits from the beach to the trail, where you can reach safety.
- **Reroutes.** In April 2026 the province said its repairs include rerouting the trail in several locations to bypass landslides, erosion and unstable slopes, but it did not say where. The mapped trail line, shown in red, comes from OpenStreetMap and may not include these reroutes, so follow the trail on the ground.
- **Camping, water, wildlife and dogs.** Check BC Parks for the current rules, fees and advice: bcparks.ca/juan-de-fuca-park.
- **Navigation.** Follow official sources, and always have a way to navigate other than this map series. Use this map series at your own risk.

Reading the maps

- **Scale and grid.** The scale is 1:25,000 (4 cm = 1 km) when printed at actual size on US Letter. Each page is north-up in UTM zone 10N (WGS 84), with a 1 km grid in purple. Ticks along the edges mark latitude and longitude.
- **Contours and shading.** Contours are spaced every 10 m and labelled every 50 m. They come from NRCan's HRDEM lidar bare-earth mosaic, with MRDEM-30 used where lidar has no coverage. Shading shows terrain; the green tint shows tree cover. I found three isolated depressions in the lidar that are errors, not real terrain. One is on JDF-03, where the lidar drops to 907 m below sea level; the other two are away from the trail on the index map. I corrected all three using heights from the surrounding ground.
- **Trail and km posts.** The red line represents the Juan de Fuca Marine Trail from the China Beach trailhead to the Botanical Beach trailhead. Numbered red circles mark km posts 0 to 47 at their OpenStreetMap positions. OpenStreetMap mappers credit the coordinates to JdF SAR and requested confirmation; km posts 30 and 47 are marked as doubtful. They have not been checked in the field.
- **Distances.** BC Parks lists the trail as 47 km, and the km posts count up to 47. The mapped trail line measures 40.4 km, so the km posts average 859 m apart on the map. The true walking distance is not known: use km post numbers to find your place, not to measure how far you have walked.
- **Tide limits.** Red rings mark BC Parks' six tide limits; their positions are approximate. "Bear Beach: tide < 3.00 m" means the beach can only be passed while the tide is below 3.00 m.
- **Beach features.** The sand colour shows what the tide covers and uncovers, rock and beach alike, out to the low-tide line on the Canadian Hydrographic Service's charts. The thin blue line marks the high-tide line, the average of the higher high tides, from Natural Resources Canada's CanVec data, mapped in the 1980s to within about 30 m. Neither line has been checked in the field. White dashes on the mapped trail line mark sections estimated to run on the beach.
- **Closure marks.** Black dashes on the mapped trail line mark the closed section between Bear Beach and Chin Beach. BC Parks does not publish exactly where the closure starts and ends.
- **Other trails.** Thin red lines mark side trails that join the Juan de Fuca Marine Trail, such as the loop at Botanical Beach. They are not part of the main trail and have no km posts. Thin dashed lines mark other trails nearby.
- **On this page box.** The box lists the page's campsites, trailheads and tide limits.
- **Names and points.** Names follow the Canadian Geographical Names Data Base (Kuitsche Creek); BC Parks' trail map spells it Kuitshe. Campsite and trailhead names and numbers are from BC Parks; their positions are from OpenStreetMap. Toilets, viewpoints and waterfalls appear at their OpenStreetMap positions and have not been checked in the field.
- **Page links and profiles.** Boxed labels at the map's edge name the next and previous pages. In the PDF they jump to those pages, as do the key points on the cover, the boxes and rows on the index map, and the numbers on the small map at the bottom right of each map page; a page's name jumps back to the index. Each elevation profile follows the mapped trail line on its page in the same direction as the map. Its ends are marked W and E, or S and N where the trail runs up or down the page, so its km post numbers can read right to left. Climb and descent are for walking from China Beach to Botanical Beach. The small map shows where the page is on the trail. It's stretched to fit, so it isn't to scale.
- **North references.** Magnetic declination (MN) is from the World Magnetic Model 2025. GN is the angle between the map's grid lines and true north.

Using the GeoPDFs

These maps are made for TopoKit (topokit.ca). Every map page is georeferenced (ISO 32000 geospatial PDF), so TopoKit, or another app that reads geospatial PDFs, can show your position on it. The cover, index map and notes pages are not georeferenced. Download TopoKit from the App Store.

Where these maps come from

This section is required by the Open Database License (section 4.6).

1. **Trail line:** The red trail line was built from the Juan de Fuca Marine Trail hiking route in OpenStreetMap (relation 7518802, downloaded November 11, 2026). I connected the individual mapped trail segments where they meet, then followed the shortest continuous route between the China Beach and Botanical Beach trailheads, leaving out side branches and sections marked as alternatives. The resulting line measures 40.4 km.
2. **Km posts:** The km post positions come from OpenStreetMap. I moved each by no more than 18 m to sit on the mapped trail line.
3. **Trail notes:** Names, kilometre values and tide heights come from BC Parks' Juan de Fuca Marine Trail map (November 2023). I used OpenStreetMap for the positions of campsites, trailheads and suspension bridges, and estimated the tide limit positions from BC Parks' marker numbers and the km posts.
4. **Coast and tidal areas:** The coastal data comes from Natural Resources Canada's CanVec 1:50,000 dataset, extracted November 5, 2026. CanVec places the ocean boundary at higher high water, mean tide, and reports a positional accuracy of 25 to 30 m. I used the Canadian Hydrographic Service's low-tide line, from BC's CHS Low Water Mark Lines, and shaded the area between the two lines in one colour, whether it is beach or rock.
5. **On beach:** I estimated which parts of the trail run along the beach by finding sections where the mapped trail line is below 4 m in the NRCan elevation data and within 30 m of the high-tide line. I joined gaps of up to 60 m and left out sections shorter than 60 m.
6. **Climb and descent:** The climb and descent figures were calculated along the mapped trail line in the NRCan elevation data, with small ups and downs left out.
7. **Other features:** Roads, trails, lakes and rivers, peaks, springs, campsites, drinking water, parking, protected areas, First Nations reserves, towns and selected places (stores, food, lodging, post offices) come from Overture release 2026-10-21.0. I included features inside each page frame and up to 500 m beyond it, and left off trails that OpenStreetMap marks closed to walkers. To avoid drawing the same trail twice, I cut other trails where they run within 12 m of the mapped trail line. I drew a track with the same name as a foot trail as that trail. Sombrio Beach Trail, mapped in OpenStreetMap as a track, is drawn as a side trail. I left off park edges on the sea or within 60 m of the high-tide line. I kept places only with an Overture confidence of 0.75 or more, and left off lodging listed only as general lodging.
